

Family Tree DNA

Genetic Genealogy Started Here

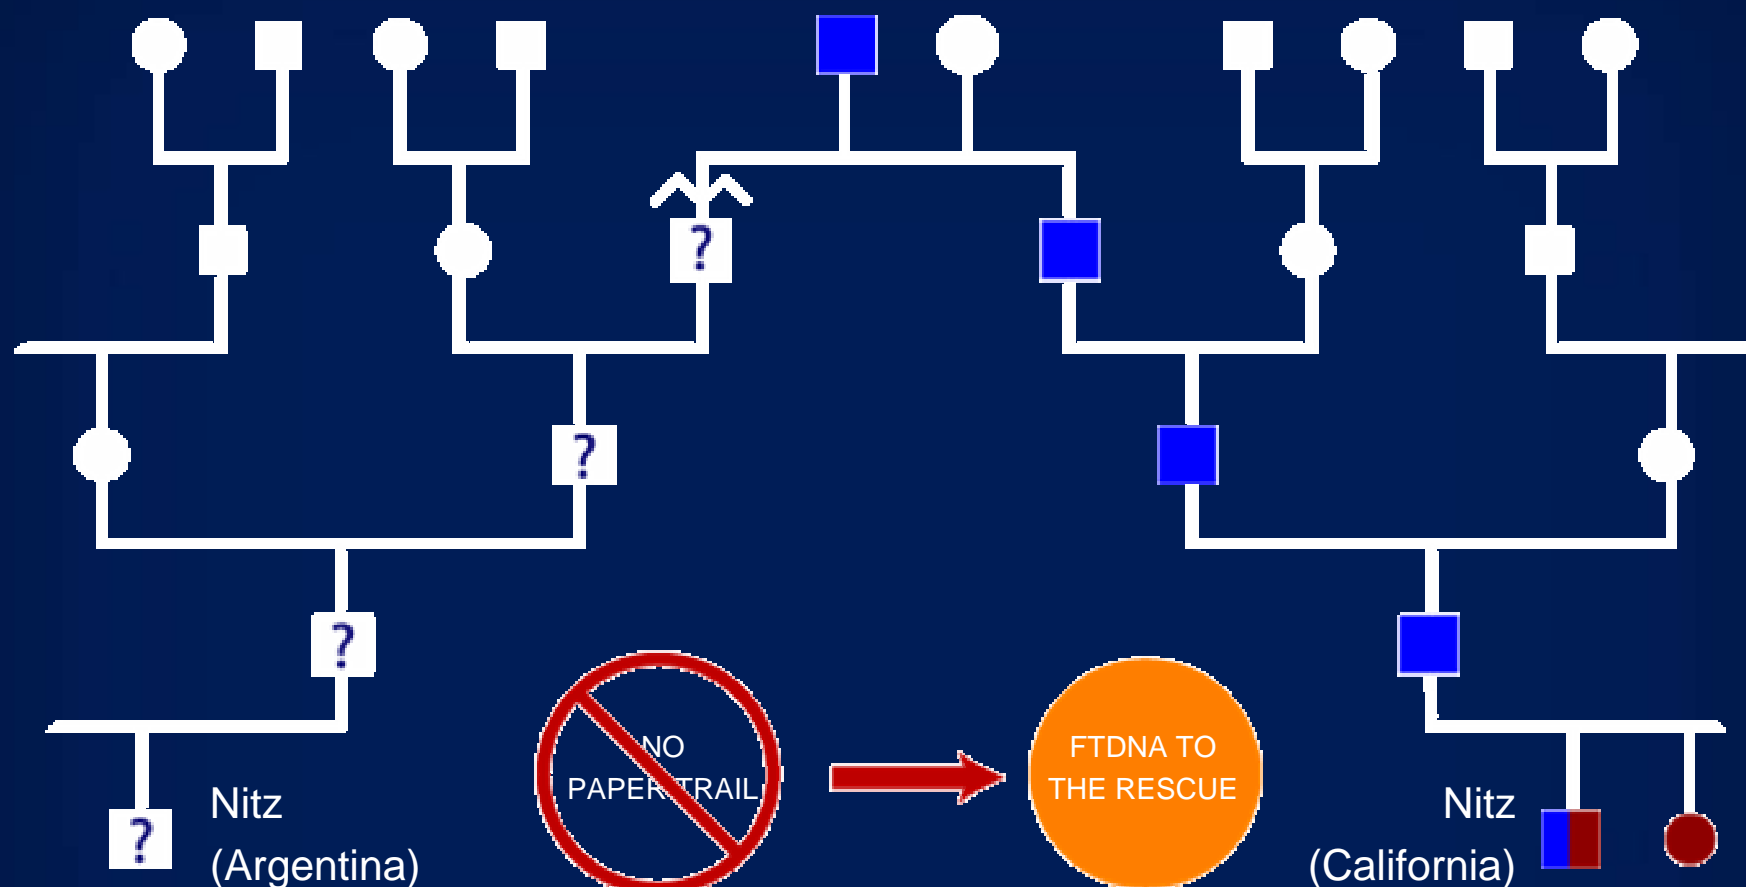

With 253,000 samples in our DNA database (the largest of its kind in the world)
your genealogical search could become even easier

Why Bennett Greenspan
founded Family Tree DNA

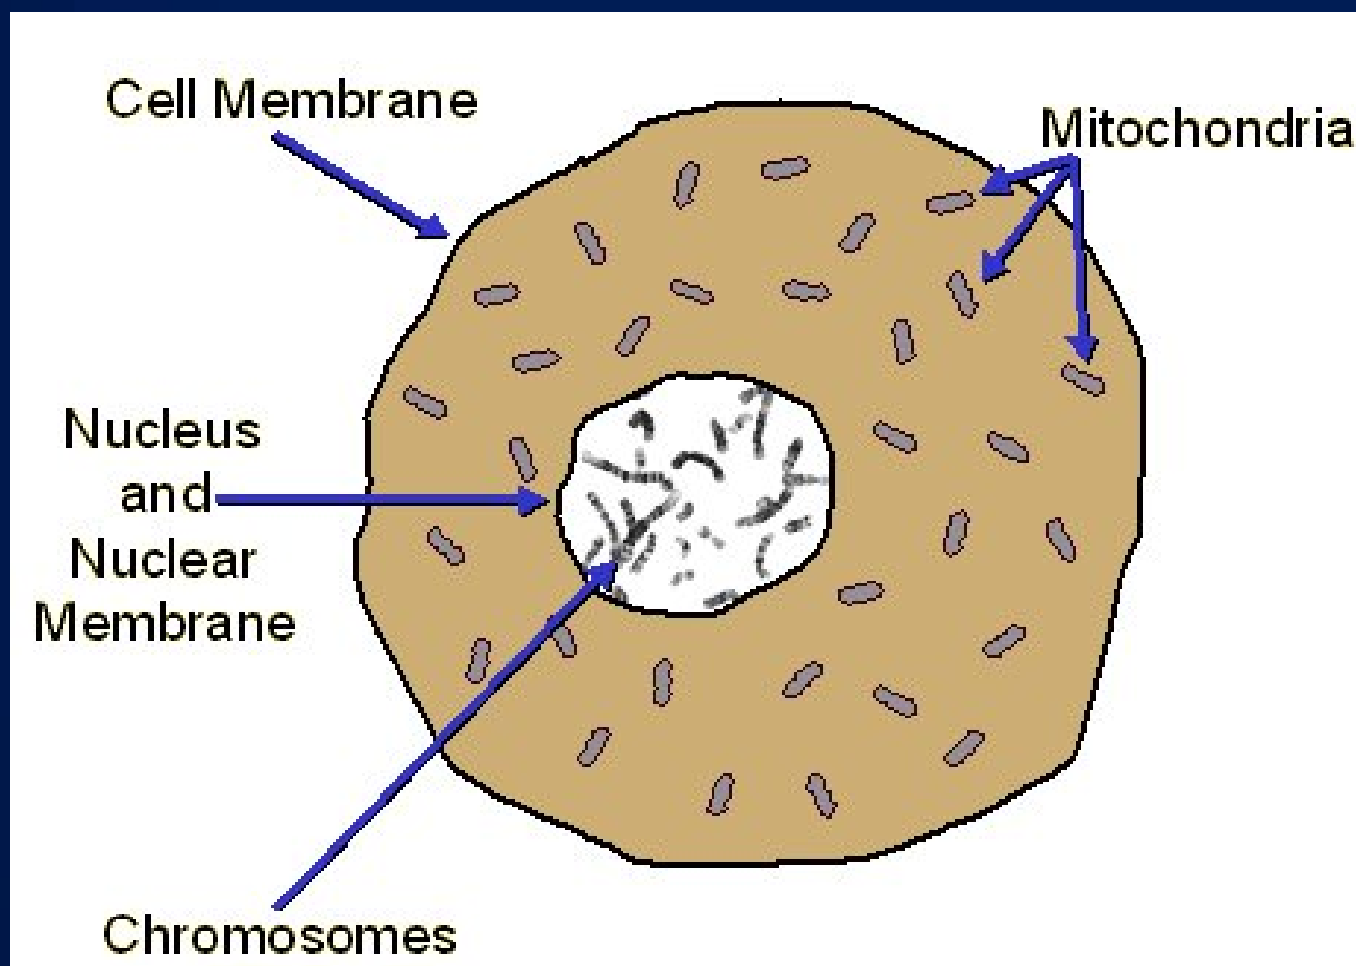

What is Genetic Genealogy

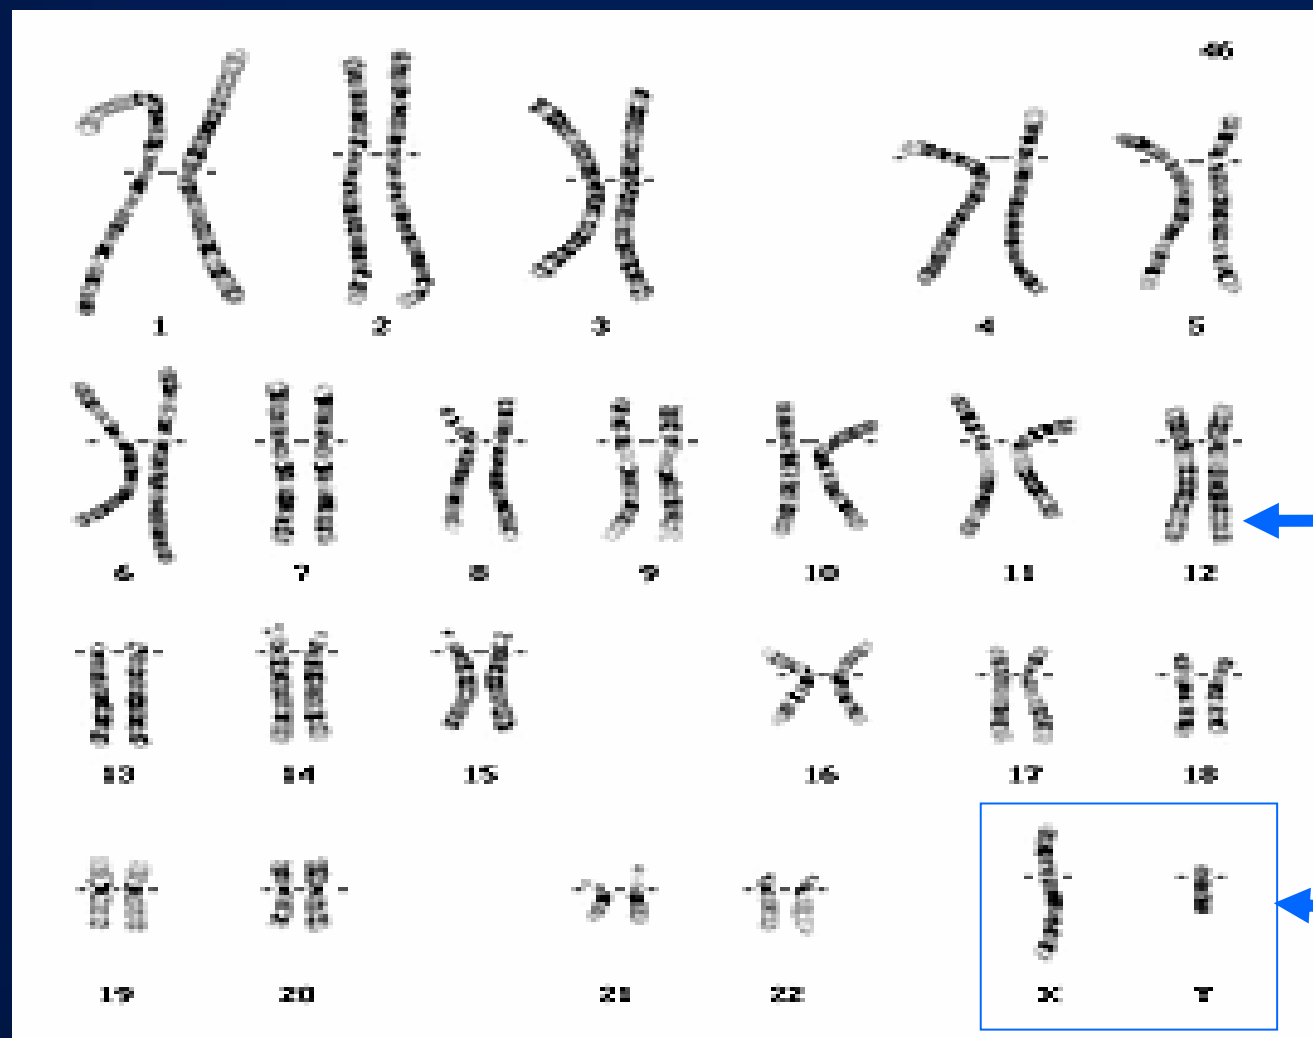

Nitz (Argentina) and Nitz (California) don't have a paper trail to connect them. Could they have shared a common male ancestor?
DNA can answer this question.

The Human Cell

Your Chromosomes

46 chromosomes - 23 from each parent

22 pairs of autosomes

1 pair of sex chromosomes

DNA Testing

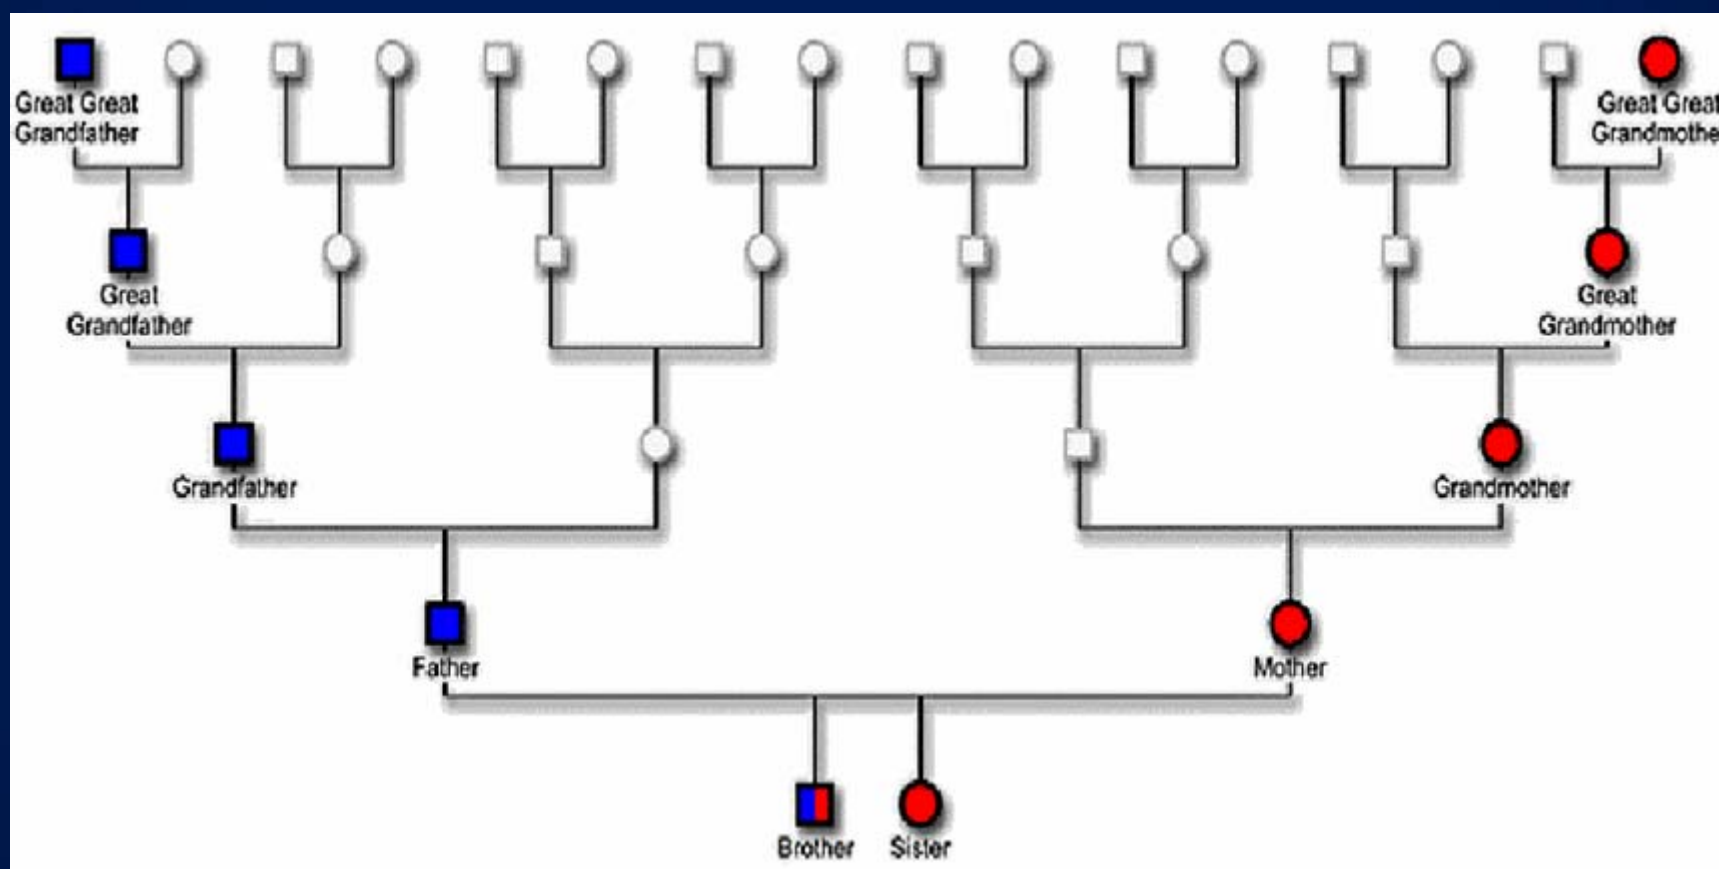

DNA for genealogy focuses on the sex chromosomes and not the autosomal DNA

- Males receive both Y-DNA and mtDNA
- Females receive mtDNA

Since both the surname and the Y chromosome follow the male line, Surname Projects are performed by tracking and analyzing the Y-DNA

What we can trace and what we can't

Simple Example With My Own Family

Ancestors in this area
are not covered by
Y and mtDNA
tests

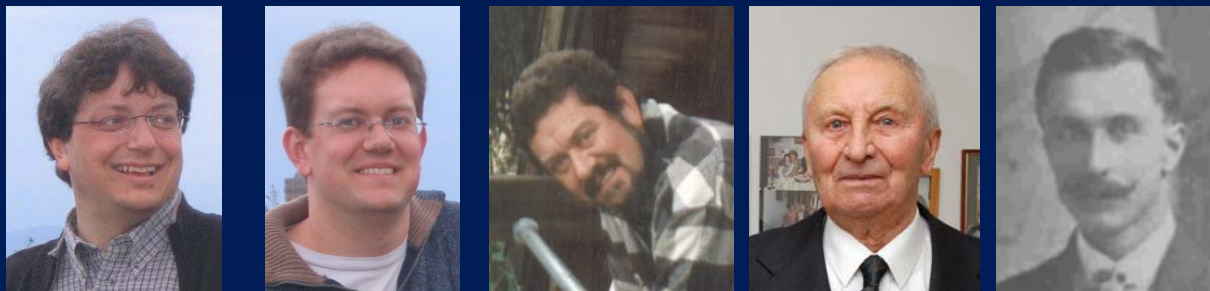

Simple Example: mtDNA comparison

16069	T	T	T	T	T
16126	C	C	C	C	C
16241	G	G	G	G	G
73	G	G	G	G	G
150	T	T	T	T	T
195	C	C	C	C	C
263	G	G	G	G	G
295	T	T	T	T	T
309.1	C	C	C	C	C
315.1	C	C	C	C	C
456	T	T	T	T	T
489	C	C	C	C	C

Simple Example: Y-STR comparison

DYS19	14	14	14	14	14
DYS385	11-14	11-14	11-14	11-14	11-14
DYS389I	13	13	13	13	13
DYS389II	29	29	29	29	29
DYS390	24	24	24	24	24
DYS391	11	11	11	11	11
DYS392	13	13	13	13	13
DYS393	13	13	13	13	13
DYS437	14	14	14	14	14
DYS438	12	12	12	12	12
DYS439	11	11	11	11	11
DYS388	12	12	12	12	12

Otherwise a very rare Y haplotype

Matches In The Entire Database

mtDNA Results – Display of HVR1

mtDNA Results

Your Haplogroup and mutations relative to the Cambridge Reference Sequence (CRS) are shown below. A value of CRS indicates no mutations. High resolution (HVR2) results are shown only if you have requested the mtDNAPlus or mtDNA Refine test. If you ordered a Mega mtDNA the Coding Region (CR) will be displayed below.

Understanding your results.

As you go through your mtDNA results, we strongly encourage you to read the [mtDNA Results Tutorial](#) that we have put together in the form of frequently asked questions about mtDNA results.

HVR1 Haplogroup	I
HVR1 differences from CRS	16264T
	16270T
	16311C
	16319A
	16362C
	16391A

mtDNA Consist of 3 sections.

- HVR1
- HVR2
- CODING Region

FTDNA Milestones

- Over 165,000 test kits sold since inception
- Collaboration with National Geographic
- 160,000 Y-DNA records in the database
- 93,000 mtDNA records in the database
- 302,000 kits sold by National Geographic

No matter what you read.

**It's ALL about the database,
And here is why...**

An Email received by FTDNA

Being an avid genealogist, I joined the [REDACTED] yDNA project to locate a common ancestor, however the results excluded me and indicated a [REDACTED] lineage instead. On questioning my parents, and mentioning the [REDACTED] name they admitted I was adopted as an infant and my deceased father was a [REDACTED]. This revelation requires me to rethink some of my core concepts, as well as shelve about half of my genealogical research. My FTDNA kit number is [REDACTED] and I have a 25/25 match with at least five of your group's members. May I join?
